- Exchange 2000, 2003, 2007 Compatible
- Ideal For Corporate Discovery
- Low Impact On Exchange Server
- Mailbox Segmentation Filter
- Include/Exclude Specific Folders
- Extremely Reliable
- Scalable And Fast

Search Private Exchange Mailboxes.

Shouldn't "Enterprise" Search include your email system? eResult for Exchange enables SharePoint Search of all private Exchange Mailboxes with full security, features and functionality, so that you can use SharePoint as your true single Enterprise Search solution. eResult for Exchange is the only connector that allows for search of private Exchange mailbox stores from MOSS 2007 and Search Server 2008.

Low Strain. Rapid Results.

eResult for Exchange supports multi-server environments to handle even the most robust Exchange system, with very low impact on your Exchange servers. Automatic scans for new mailboxes and rapid change management for deletions and moves of email items en-

sure accurate search results. The existing security of each mailbox and its items (emails) is honored automatically.

Granular Control Of Updates.

eResult for Exchange provides easy-to-use filters that allow for the segmentation of mailboxes by groups or content. You can also include or exclude entire folders. This feature offers granular control of the crawl schedule, allowing for more frequent updates to SharePoint.

eRESULT® For Exchange Is Ideal For Corporate Discovery.

Our system allows you to grant specific users and groups search rights across all mailboxes. This provides the means for corporate council or compliance to always have access to the information they need.

Microsoft® Search Server 2008

Microsoft Office SharePoint Server 2007
